## Work History

**2016-05 - Current**

### Senior Frontend Developer

*OSeven Telematics, Athens (Fully remote)*

- OSeven Telematics is a B2B, product oriented, Insurtech company.
- As Senior Frontend Developer I was tasked with develop a fully responsive and cross browsing compatible web portal that consumes Google and custom APIs. Because of the high interactivity with the user great focus was given to UI and UX.
- From January 2020: following Scrum methodology and using Teams, Jira and Git, leaded a team with juniors Frontend and Backend developers and one QA tester.
- From July 2019: Refactored completely and further developed OSeven's UBI web portal replacing old technologies with ReactJS, ReactQuery, Sass, ReactBootstrap, WebPack and Yarn.
- From May 2016 to June 2019: Developed OSeven's UBI Web-portal using AngularJS, Html5, Less, Bootstrap3, Grunt, Coffee and NPM.
- Automatic tests wrote with Cypress and React Testing Library assured Continuous Integration/Deployment strategies.

**2023-01 - 2023-07**

### Senior Frontend Developer (Consultant)

*Trading Point - XM, Athens (Fully Remote)*

- XM is a forex and CFD broker own by Trading Point.
- As Senior Developer I was tasked to build Katana, a fully custom UI library on top of Kendo UI.
- With the goal to unify the UI of all the internal frontend projects of the company, I had to analyze all the existing webapps for gather and then write the technical specifications.
- When the analysis was done I proceeded building custom, reusable React Styled Components.
- I tested each component using Jest before integrate

them in the existing projects.

- Technology stack: React Typescript, Styled Components, Kendo UI.
- High focus on "interactive" documentation using Storybook.

2022-02 -
2022-12

### Senior Frontend Developer (Consultant)

*I6 Systems, London (Fully Remote from Athens)*

- I6 Systems digitalised the fuel supply chain for airlines, airports, and into-plane operators.
- As Senior Developer I was tasked to lead the refactoring of the frontend part of the older of five web portals (products) of the company.
- With the goal to provide the new UI/UX to the customers as soon as possible and gather periodical feedbacks, I choosed to proceed with continuous deployment strategy.
- The new release needed to satisfy the general development standards of the company so, while working with my team following Scrum methodology, I was having frequent cross-team meetings with the other nine Frontend Developers for keep aligned all the projects.
- I participated to build a library of reusable custom components shared across all the projects.
- Technology stack: NextJS, ReactJS, Sass, Material UI, WebPack and Yarn.
- High focus on write automatic tests using React Testing Library.

2016-02 -
2016-04

### Frontend Developer

*SpotMechanic, Nea Ionia, Athens*

- SpotMechanic provides to private buyers, technical and analytical inspection on used cars before to process them.
- Created a fully working demo, translating directly the brainstormed ideas of the CEO to technical requirements.
- Developed a "mobile first" demo Web-app using AngularJS, Less, Bootstrap 3, custom Rest APIs, Grunt and NPM. Organized tasks and code with Trello and Git.

2015-07 -
2015-12

### Frontend Developer

*Wide Side, Milan*

- For " **CheBanca!** ": as part of a large and internationally based team of Frontend Developers I was tasked with develop a fully responsive and cross browsing

compatible, "mobile first", Web-portal for the new e-banking service. Because of the high sensibility of the data, the main focus was put into apply all best practice and standards related to cyber-security.

- Developed with AngularJS, I took on me as main task to restructure all the code for make possible the upgrade from the basic "built-in" single layer routing of AngularJS to the multilayer ngRouting, with the scope to unblock the full potential of the framework.

2015-03 - 2015-06

**Frontend Developer**

*CGM Consulting, Milan*

- For " **Credito Emiliano** ": as part of a small team of Frontend developers I was tasked with develop a fully responsive and cross browsing compatible, "mobile first", Web-portal for the new e-banking service. Because of the high sensibility of the data, the main focus was put into apply all best practice and standards related to cyber-security.
- Developed with AngularJS, Less, Bootstrap 3, custom Rest APIs, Grunt and NPM.
- I joined the team in the final steps of the project. Working in a stressful environment due to the short deadlines, I helped successfully to not to miss the final release date.

2014-12 - 2015-04
